

Flair Showers

Standard Bases

Our Standard Shower Cubicles come with a self-supporting free standing base that sit close to the floor. All Flair showers are made to sit level on a level floor and can be glued to floor with liquid nails or similar product and are supplied with a standard Shower Waste outlet. Typically used on timber floors or concrete floors where the waste pipe lines up with the shower waste. The concrete slab can also be cut to accomodate this shower system if a low step/hob is needed.
